*As Near To You As Your
Mail Box*

Parcel Post deliveries of Seed are prompt and regular. The Post Office does not tolerate strikes or delays. Parcel Post deliveries are dependable.

EITHER of the above can be your experience this year. As work in the factories and industries slacken, more people practice economy. There can be no economy more profitable and satisfactory than a garden full of tender, fresh, delicious vegetables. A garden will furnish fresh food, high in vitamins, for six months or half year, and canned goods for the balance of the year. Can you make a better investment? We know of none that will furnish results day after day as a garden will do. An investment of Five or Ten Dollars worth of Garden Seeds will produce sufficient vegetables for a large family for twelve months.

Planting, Maturity and Weight Table

This is for field planting, and where plants and roots are stated, it is necessary to have them ready beforehand. The third column indicates the distance that the plants should stand in the rows, and where seed is sown they should be thinned out to this distance. The fifth column indicates maturity from the time the plants are planted in the field, or seed is sown in the field. Also note that the last column is the approximate weight of seeds and not products. Time of planting and maturity is for latitude of Louisville.

*Indicates that the crop can either be planted in the Spring or Fall; if in the Spring, February to April; in the Fall, August to September.

CELERY

200 to 250 Plants Required for 100 Feet of Row

Culture—Celery seed is very slow in germinating and should therefore be sown in finely prepared, rich soil which can be kept moist. For early use it is advisable to sow in hot-beds or in shallow boxes in the house or early in April in the open ground. Pack the soil well over the seed with the foot or with back of the spade. Transplant soon as large enough to handle, setting the plants 6 inches apart in the row. Trim off the tops of the plants and set firmly. It does best on soil where there is plenty of moisture, but will grow on upland, provided it is rich and the crop well cultivated. It can be planted in single or double rows in furrows a little below the level of the soil and earthed up as it grows. Care should be taken not to get the soil into the heart of the plant. When cold weather comes, take up and set the plants closely together and cover with straw and leaves to keep out frost.

GOLDEN SELF-BLANCHING—The Finest Early Celery. It is very easily blanched and is of exceptionally fine flavor. Grows to a fair size and is satisfactory in every way. French grown seeds are the best and our seed comes direct from the most careful growers. Pkt., 20c; ½ oz., 35c; 1 oz., 60c; ¼ lb., \$2.00; 1 lb., \$7.00; postpaid.

DWARF GOLDEN HEART—This new variety is especially valuable both for early and late planting. It makes large, attractive stalks which are very easily blanched; its attractiveness and size make it sought after by gardeners and truck growers. The stalks grow compact and solid, which make it especially suitable for bunches. Pkt., 10c; 1 oz., 25c; ¼ lb., 75c; 1 lb., \$2.50; postpaid.

WINTER QUEEN—A popular Winter variety; a strong grower and splendid keeper. Pkt., 10c; 1 oz., 25c; ¼ lb., 75c; 1 lb., \$2.50; postpaid.

CELERIAC OR TURNIP ROOTED CELERY—This plant forms a thick root which is used instead of the stalk. It is fit to use when about two inches in diameter. Seed should be sown and given same treatment as celery, but the plants do not require earthing up. Plants can be set six inches apart in rows two feet apart. To keep over winter, treat same as carrots or beets except that moist soil should be worked in about the roots to keep them plump. Pkt., 10c; 1 oz., 25c; ¼ lb., 75c; 1 lb., \$2.50; postpaid.

Corn Salad Or Fetticus

Makes a fine salad for Winter and Spring; used in place of lettuce or spinach. Can be sown in September in drills a foot apart. Soil should be packed over the seed. Water—For garnishing or salads. Pkt., 10c; 1 oz., 40c; postpaid.

**GIANT PASCAL**

CUCUMBERS

One ounce will sow 100 feet of row.

Culture—An early crop of cucumbers can be had each year from starting the seed in pots, box or a piece of sod, so they can be readily transplanted without checking the growth. For outside planting the ground should be prepared and put in good condition and the seed should be planted about the latter part of April or the first of May in this particular latitude. The seed should not be planted more than an inch deep and in hills slightly raised above the ground, about 4 feet apart each way.

BLUE RIBBON GEM CANTALOUPE

HONEY BALL CANTALOUPE—The Honey Ball Cantaloupe is a wonderful melon for home use, and for shipping. It carries well enroute, and does not lose perceptibly in weight or flavor. The flesh light green, cavity very small, and the flavor is delicious. It resists drought and disease. The rind is somewhat similar to the Honey Dew, except that is slightly netted. They mature about the same time as Rocky Ford, and grow well anywhere.

We recommend these as one of the best of the new varieties of cantaloupes on the market this season. Pkt., 10c; 1 oz., 40c; ¼ lb., \$1.25; postpaid.

Culture—Melons do best in sandy soil or sod land and the ground should be made rich. The hills can be put four to six feet apart with ten to twelve seeds in each hill. Put the seeds an inch deep and when danger of frost is over, thin to four good plants to a hill. Cultivation should be kept up as long as possible. One ounce of seed is sufficient for 50 hills; 2 pounds per acre. Plant in May and June.

BLUE RIBBON EXTRA EARLY AND EARLY

Dwarf Varieties

Culture—Peas should be a part of each and everyone's garden. They should be planted as early in the Spring as possible. The early varieties come on faster if they are planted shallow, a couple of inches of dirt being sufficient to enable them to take good root, but the latter varieties, or wrinkled varieties, should be covered about two and a half or three inches. It is also advisable to have the soil pressed down tightly over the Peas. They should be planted in succession up until about the middle of June in this latitude.

After that time, it is hardly advisable to put them out any more, as it is exceedingly hot and they do not bear well.

A pound will sow a 50-foot row; 84 to 120 pounds will plant an acre. The rows should be 2½ to 3 feet apart. Hard round early varieties are ready for use in about 50 to 60 days, later varieties in about 70 to 85 days.

PLANTING SUGGESTIONS—For a succession of fresh flavorful peas throughout the entire season, plant an early, second early and a late variety at the same time and you will have a fresh supply coming on regularly, the second early following the early and the late following the second early. For your guidance we have marked the varieties, designating the early peas with numeral (1), the second early with numeral (2) and the late with (3).

TURNIPS

Culture—Turnips are very easily grown, but to have roots of good quality they should make a rapid growth. For early Summer use, it is advisable to get them sown early (February or March), so that growth can be made before hot weather comes. For Fall or Winter use, sow from July to September. They can be sown in drills or broadcast. An ounce will sow 400 feet of drill, or a plot 19x19 feet broadcast. An acre requires one and one-half pounds if drilled, or two pounds broadcast. The ground can hardly be too rich and seed will start much more quickly if sown in freshly stirred soil. When sown in drills, thin out as soon as plants are large enough to handle. The salad turnips require three pounds to the acre. Ruta-Baga or Swede turnips should be sown in July or early August and be well cultivated.

Turnips are very fine for stock feeding, as well as for table use, and should be grown more largely. They are very productive, easy to grow and the cost of seeding is practically nothing. Our turnip seed is French grown and is extra fine. If turnips are gathered and the tops cut off before severe freezing weather and piled on soil which is well broken and covered with three or four inches of dirt, they will keep well into the Winter, retaining their firmness and also their flavor.

BULBS FOR SPRING PLANTING

Gladioli

All large size bulbs

This is a flower which has as great variation in color as the Pansy; is fine for garden decoration and no flower is as satisfactory for cutting, for, if cut when first flower opens and kept in fresh water, every bud will open, and this extends over a week or so. Plant the bulbs four to six inches deep and six inches apart, from April 1st to May 15th, in this locality. They will not flower in the shade, but are not particular as to soil; of course, the richer the better, but do not use fresh manure in the ground. When cutting the flower spike, it can be cut down to within three full leaves of the ground without harming the development of the bulb. Ask for prices, large quantities.

AMERICA—Conceded to be the most popular variety in existence and the most widely grown. The flowers are a dainty, soft pink in color, borne on spikes from 2 to 3 feet in length. For general use this variety cannot be too highly commended. 50c doz.; \$1.25 per 25; \$1.80 per 50; postpaid.

MRS. FRANCIS KING—A new variety which excited great comment and admiration, both for size of flower and beauty. The color of the flower is a light scarlet; the flowers are very large, usually measuring from 3½ to 4 inches in diameter. 60c doz.; \$1.25 per 25; \$2.00 per 50; postpaid.

HALLEY—Delicate Salmon-pink, with a slight roseate tinge, the lower petals bear a creamy blotch with a stripe of bright red through the center. 70c per doz.; \$1.50 per 25; \$2.90 per 50; postpaid.

EVELYN KIRTLAND—A beautiful shade of rosy pink, darker at the edge, fading to shell-pink at the center, with brilliant scarlet blotches on lower petals, the entire flower showing a glistening, sparkling lustre. Very tall spike. 70c per doz.; \$1.50 per 25; \$2.90 per 50; postpaid.

HERADA—Blooms of immense size on tall, straight spikes. The large blooms are pure mauve, glistening and clear, with deeper markings in throat. 70c per doz. \$1.50 per 25; \$2.90 per 50; postpaid.

GLADIOLI

Be sure to look over our list of selected fancy Dahlias at popular prices.

PEACE—The finest white variety ever offered. The flowers are large and of good form, borne on a heavy, straight spike. The beauty of these flowers is enhanced by a delicate feathering of pale lilac on the interior petals. 90c doz.; \$1.75 per 25; \$3.25 per 50; postpaid.

SCHWABEN—A variety of extreme vigor, many of the bulbs producing two or three flowering stalks which very often produce side branches besides. The stalk produces about 20 very large flowers 6 to 8 usually open at the time. The color is the best of clear canary yellow, shading to a soft sulphury yellow when opening. 70c doz.; \$1.50 per 25; \$2.80 per 50; postpaid.

GLADIOLI IN MIXTURE—Blue Ribbon Mixture. Having had many calls for assortments of named varieties, we can offer this mixture, which is made up from our choice varieties; containing the greatest selection of colors, all of which are fancy sorts. 50c doz.; 90c per 25; \$1.70 per 50; postpaid.

CALADIUMS

CALADIUMS—Elephant Ears. One of the finest foliage plants grown and can be used as single specimens, in groups, as a border to divide lawn from garden, or as a border for taller growing plants in formal beds. This year we have bulbs of very high quality and in four sizes. The first size is immense and will produce plants of exceptional vigor. 1st size, 13-15 in. diameter, 60c each; 2nd size, 11-13 in., 40c each; 3rd size, 9-11 in., 25c each; 4th size, 7-9 in., 15c each; postpaid.

TUBEROSES

TUBEROSES—Large No. 1 Size Only. We offer the "Excelsior Pearl," which is the finest of all, producing close spike of fine double flowers. Ground cannot be too rich. They may be placed in the hottest place in the garden and given an abundance of water. Require rather a long season and if they can be potted up, one bulb in a 4-inch pot, and started into growth a month before the season for planting out, better success will be had in flowering them. 10c each, 4 for 25c; 60c doz., postpaid.

BLUE RIBBON SEEDS

BLUE RIBBON GRASS AND CLOVER SEEDS FOR SPRING SOWING

PLEASE NOTE—We are departing this year from our usual custom of quoting approximate prices on field seed of various kinds. We found this very unsatisfactory in our previous years experience. It has tended to throw orders to us when the market was higher than catalogue prices. In that instance we were forced to write the customer for additional remittance, which was not altogether pleasing to us or to the customer. And, if our prices in the catalogue were higher than the market, we consequently were not favored with the business.

This year we are listing only small quantities of field seeds, and respectfully ask that our customers write us for prices when they are ready to buy, or refer to our complete list of field seeds which will be printed on the backs of the order sheet, which will be enclosed to you, guaranteeing prices for a certain number of days after date of issue. These lists we expect to mail continuously during the season, and if you do not get yours, use one of the order sheets or envelopes, and write us for current prices.

Our facilities for supplying fancy grasses and clovers are unexcelled. Being in the heart of the producing section, we offer the cream of the crop in Kentucky Blue Grass, Orchard Grass, Red Top and Clovers of different kinds. This natural advantage also enables us to quote the fanciest grades at greatly reduced prices. Freight charges are less, no excess transfer, drayage or handling expenses to include in the selling price of the seed.

Fancy Blue Grass Brand, recleaned, per lb., 30c; 10 lbs., \$2.00; postpaid.

ORCHARD GRASS (*Dactylis Glomerata*)—This is one of the very best grasses for upland, loamy or moderately stiff soils, affording a large amount of pasturage as well as making excellent hay, if cut when in bloom. It grows about three feet high and matures much earlier than timothy, does not exhaust the soil and will produce two to three tons per acre of fine hay. Sow 1½ to 2 bushels per acre. Blue Ribbon Brands fancy recleaned seed. 1 lb., 35c; 10 lbs., \$2.45.

BLUE RIBBON
TIMOTHY

Present price Blue Ribbon Brand, 1 lb., 20c; 10 lbs., \$1.45; postpaid.

TALL MEADOW OAT GRASS (*Avena Elatior*)—Sometimes called Evergreen Grass or French Rye Grass. Very desirable for permanent pasture and meadows because of its early growth, also from the fact that it produces a heavy growth after being mown, and lasts several years. Present prices, Blue Ribbon Brand, per lb., 35c; 11 lbs., or one bushel, \$3.50; postpaid. All quantities sacked free.

BERMUDA GRASS (*Cynodon Dactylon*)—Very popular and a great boon in the South for pasture; when once established, no amount of drought or hot weather will kill it out. It cannot be recommended too highly for pasture and general culture in the South. Its strong, creeping roots will absolutely prevent wash. Per lb., 45c; 10 lbs., \$4.00; postpaid.

JOHNSON GRASS (*Sorghum Halapense*)—A most prolific perennial hay and pasture grass, eminently suitable to hot dry climate and soils. CLOVERS

We are departing this year from our usual custom of quoting approximate prices on field seed of various kinds. We found this very unsatisfactory in our previous years experience. It has tended to throw orders to us when the MARKET was higher than catalogue prices. In that instance we were forced to write the customer for additional remittance, which was not altogether pleasing to us, or to the customer. And if our prices in the catalogue, were higher than the market, we consequently were not favored with the business.

This year we are listing only small quantities of field seeds, and respectfully ask that our customers write us for prices when they are ready to buy, or refer to our complete list of field seeds, which will be printed on the BACKS OF THE ORDER SHEET, which will be inclosed to you, guaranteeing prices for a certain number of days after date of issue. These lists, we expect to mail continuously during the season, and if you do not get yours, use one of the order sheets, or envelopes, and write us for current prices.

ALSIKE OR SWEDISH CLOVER—(Trifolium Hybridum). A very desirable variety for use in connection with Timothy or Red Top. The blossoms much lighter in color, rather resembling White Clover. Price, Blue Ribbon Alsike Clover, 1 lb., 45c; 10 lbs., \$3.50; postpaid; sacked.

BOKHARA OR SWEET CLOVER—Apart from its great value as a nitrogen gatherer and producer of humus, Sweet Clover is being used most extensively here in Kentucky as a pasture as, once stock become used to it, it is eaten as readily as Red Clover and the stock appear to thrive on it equally as well. It is especially good as an early pasture. For hay, it is cut just as it is coming into bloom and is handled in a similar way to Alfalfa. It is also a very valuable plant for bees, being the principal honey plant in some sections.

HULLED MAMMOTH WHITE—Per lb., 35c; 10 lbs., \$2.75; postpaid; sacked.

HULLED MAMMOTH YELLOW—Per lb., 35c; 10 lbs., \$2.75; postpaid; sacked.

JAPAN CLOVER—(Lespedeza Striata). This is particularly suitable for waste lands, woodland pastures, grows fairly well on poor soils, and spreads rapidly; and when once established, usurps wild growths, and will in many cases even subdue broom sedge. It is not, however, a pest, and can be gotten rid of by plowing it up, and is excellent as a fertilizer. Sow broadcast in the Spring during March or April, at the rate of about 10 pounds per acre. Price, per lb., 40c; 10 lbs., \$3.00; postpaid; sacked.

WHITE CLOVER—(Trifolium Repens). The white Dutch Clover is a dwarf and very lasting plant, growing everywhere, and is an excellent addition to permanent pasture mixtures. Always used in lawn mixtures, as it forms a close sod and does not wash in heavy rains. Famous also as a bee plant. Sow one to two pounds per acre in mixture. Price, per lb., 75c; 5 lbs., \$3.50; postpaid; sacked.

MILLETS

TRUE TENNESSEE GROWN CULTIVATED GOLDEN MILLET—Sow 1 to 1½ bushels per acre, broadcast. Pk., \$1.00; postpaid.

GOLDEN MILLET—True Golden Millet produces a large and luxuriant growth of foliage, has very large heads which ripen evenly and if cut when in bloom is extremely palatable. Sow broadcast one bushel per acre. Pk., 90c; postpaid.

PEARL OR CAT TAIL MILLET—(Pencillaria). Makes a splendid continuous cutting forage crop, either for green fodder or hay. If sown broadcast, 20 to 30 pounds should be used, but quicker and more frequent cuttings will be obtained if sown 8 to 10 pounds per acre in drills 3 feet apart and cultivated occasionally. Per lb., 30c; postpaid.

FORAGE CROP

DWARF ESSEX RAPE—The Quickest Growing Forage Crop Produced Ready to Pasture Within Sixty Days. Invaluable for hogs, sheep and poultry. A good crop of rape will carry more hogs during hot, dry weather than four times the amount of land planted to anything else. Hogs fatten quickly on rape with very little grain. Sow four to six pounds per acre. 1 lb., 20c; 10 lbs., \$1.40; postpaid. Buyer's Expense—100 lbs., \$9.00.

CANADA FIELD PEAS—Canada Field Peas should be sown in February or March, weather permitting. They make large yields of most nutritious hay, cut either green or cured for hay. They should be sown one and a half to two bushels per acre with one-half bushel Spring oats. Pk., \$1.50; bu., \$4.50.

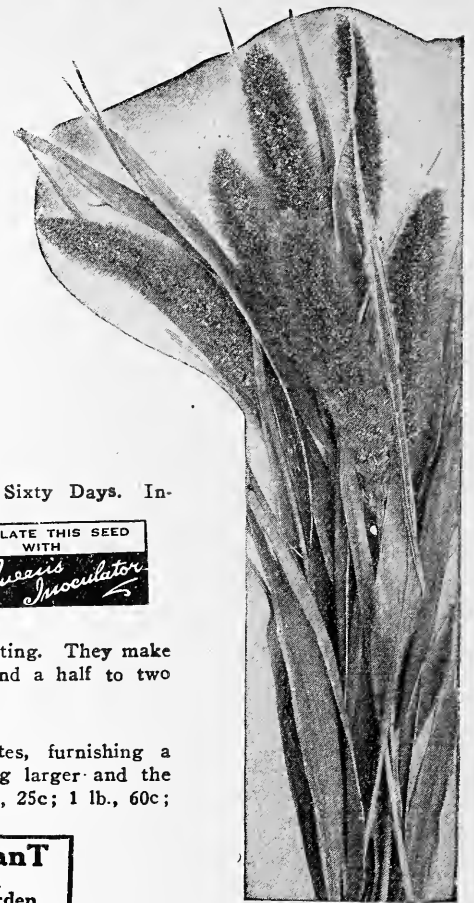

TEOSINTE—A valuable continuous cutting forage plant food for Southern and Southwestern States, furnishing a most nutritious food, green or dry, for horses and cattle. It resembles Indian corn, the leaves being larger and the sap sweeter. Sown in May in drills 3½ to 4 feet apart; 2 to 3 pounds per acre. 1 oz., 15c; ¼ lb., 25c; 1 lb., 60c; 5 lbs., \$2.50; postpaid.

BROOM CORN—Culture—Sow the seed in drills three feet apart at the rate of from three to five pounds per acre, thinning to about three inches apart, so as to leave seventy stalks to the rod. Cultivate same as for corn. If the land is rich, the seed should be sown thicker and the stalks left closer together than on the medium or poor land. To make the best selling corn it should be cut when seed is in the milk state, as, if allowed to ripen, it changes from its bright green color and takes on a reddish tinge which does not bring as good prices. It can be used however, even when overripe, but will pay much better prices if cut at the proper time. When marketed, the stalks and brush should not exceed over sixteen inches in length, and there is no necessity of leaving long stalks, as this will only depreciate the price. For shipment it can be baled or bundled; baling, however, is better.

OKLAHOMA DWARF—The principal variety used in Oklahoma, on account of earliness, dwarf habit, robust growth, extreme productiveness, long, well-fibered brush, and above all, its ability to resist drouth. It averages about five feet high which makes it convenient to pull the brush. 1 lb., 30c; 5 lbs., \$1.10; postpaid. Buyer's Expense—1 bu. (45 lbs.), \$4.50; sacks included.

IMPROVED EVERGREEN—An excellent variety of good length; has fine, straight straws and of greenish appearance after being cut. This variety commands the highest market price. 1 lb., 30c; 5 lbs., \$1.10; postpaid. Buyer's Expense—1 bu. (45 lbs.), \$4.50; sacks included.

MAMMOTH RUSSIAN SUNFLOWER—Usually a very profitable field crop, the seeds of which are used for bird and poultry foods, and required in enormous quantities. Sunflowers are planted and cultivated about the same as corn. Besides being very ornamental, sunflowers are useful for planting around the edges of gardens and other spots, and will yield a profitable crop of grain for the Winter feeding of poultry. Pkt., 10c; 1 lb., 30c; 5 lbs., \$1.00; postpaid. Buyer's Expense—100 lbs., \$9.00. Sacked.

MUNG SOY BEANS—The New Wonder Crop—Hasting's Mung Beans bid fair to out-rival anything yet discovered as a hay, forage and soil-improving crop. Mung Beans are drouth-resistant and have made wonderful crops of hay and forage where cow peas and soy beans have been killed off completely by the blistering and withering heat of an extended summer's drouth.

Mung Beans mature about 15 days earlier than soy beans and cow peas and invariably have produced larger tonnage of hay and forage, as well as larger production of beans. Grows 4 to 6 feet tall and is one of the finest soil improvers yet discovered. 2 lbs. of Mung Beans will produce about 2 tons of cured hay. Requires about 8 lbs. of seed to plant one acre. Plant in rows about 3½ feet apart and 2 to 4 inches apart in the rows. Price, pkt., 10c; 1 lb., 40c; 5 lbs., \$1.75; 10 lbs., \$3.00; postpaid.

BUCKWHEAT

JAPANESE—Biggest Grain Money-Maker for Poor Land—An excellent grain, forage and fertilizer crop. Does better than corn on poor land. One of Kentucky's largest and most profitable crops is buckwheat. Especially adapted to mountainous sections or poor land which will not produce good red wheat or corn. Sow 1½ bushels per acre broadcast during June, July and August. Bu., \$2.50; 5-bu. lots, \$2.35 per bu., bags included.

Note—This year we are listing only small quantities of field seeds, and respectfully ask that our customers write us for prices when they are ready to buy, or refer to our complete list of field seeds, which will be printed on the **Backs of the Order Sheet**, which will be inclosed to you, guaranteeing prices for a certain number of days after date of issue. These lists, we expect to mail continuously during the season, and if you do not get yours use one of the order sheets, or envelopes, and write us for current prices.

SOJA OR SOY BEANS

SOJA OR SOY BEANS—The cow pea and soy bean have many points in common and are closely allied. Unlike some varieties of cow peas, the soy bean grows upright, never trails or spreads widely over the ground. Sow $\frac{1}{2}$ bushel in drill, $1\frac{1}{2}$ bushels broadcast in May, June or July.

CUTTING MAMMOTH YELLOW SOY BEANS FOR HAY

EARLY LEXINGTON SOY BEAN—Unrivalled for the North and South. Extremely early. Produces heavy hay and grain crops. Grows upright, making excellent forage or hay. Recommended by the Lexington Agricultural Experiment Station, from which it gets its name, as being one of the finest of the early maturing varieties. Splendid for late planting. Ask for prices.

MANCHU SOY BEANS—A small, round, yellow soy bean with a black eye, producing an immense amount of seed and maturing early. Very popular in Indiana, Ohio and the middle west. Grows in bush form, standing up excellent for hay. Sow at the same rates as other soy beans. Ask for prices.

HABERLANDT SOY BEAN—An excellent early maturing variety. Makes very quick growth, maturing about two weeks sooner than the Mammoth Yellow Soy Bean. A vigorous grower and especially good for hay and forage. Fine for both early and late planting. Ask for prices.

MAMMOTH YELLOW SOY BEAN—The Mammoth Yellow produces about twice the amount of foliage that other varieties will, is much later, hence in more northerly latitudes may not ripen all its seed, but is excellent in most any latitude where it is to be used for forage, hay or soil improving purposes. Farther south it can be depended upon to produce immense crops of both forage and seed. Matures in about 150 days. Ask for prices.

HOLLYBROOK SOY BEAN—Earlier than the Mammoth Yellow. Fine for hay, forage and beans. Matures in about 130 days. Possibly the heaviest seed yielding variety of the early maturing sorts. Ask for prices.

COW PEAS

COW PEAS—The Great Soil Recleaner, Hay and Forage Crop. We omit prices on Cow Peas here, because we cannot quote intelligently at the time this catalogue goes to press. Ask for prices when you are ready, please. Cow peas and soy beans are known as the "twin soil makers" and are possibly the most valuable of all leguminous plants. Their value and acknowledged reputation as land builders as green manure crops, as ensilage, value in rotation, as forage crops, as a hay or grain crop cannot be adequately estimated. They are adapted to a wide range of soils and climates and one of the cheapest of all grain, hay, forage and soil improvement crops to grow. They are especially valuable and necessary in rotating crops. They will thrive where clovers fail and serve the same purpose of feeding the soil. Supply the soil with an abundance of organic matter such as can be produced with a good crop of cow peas and soy beans and your succeeding cash money crops will be doubled or trebled in value.

WHIPPOORWILL—Best early variety for hay and forage. An excellent soil improver but does not produce as much foliage as the Mixed and Black Cow Peas.

BLACKS—Little later than the Whippoorwill, but produces more foliage. One of the best of all varieties for forage and soil improvement.

BRABHAM—One of the best early varieties for hay and forage. Upright in growth.

NEW ERA PEAS—Are two or three weeks earlier than Whippoorwill, and make a heavier growth of vine. They are very popular in the North and West on account of their earliness. The seed is small, but a large amount of it is produced on the vines.

CLAY—An excellent variety for forage and soil improvement. Trailing and a rank grower.

MIXED COW PEAS—A general mixture of good standard varieties which are used largely for forage and improving the soil. Produces rank foliage.

SORGHUM OR CANE

HONEY DEW OR SYRUP CANE—One of the best sorghums ever used for making sorghum molasses. Makes a clear, fine syrup of rich amber color, which contains very much more saccharine matter than syrups from other cane. Foliage is abundant, strong growing, large size stalks, and good yielder. We strongly recommend this sort for forage, but more especially for the best syrup-producing sorghum that can be planted. 1 lb., 25c; 5 lbs., 90c; 10 lbs., \$1.75; postpaid. Buyer's Expense—10 lbs., \$1.25. All prices include sacks.

HONEY DEW A WONDER FOR MAKING MOLASSES

I have been operating a Sorghum Syrup outfit for the public here and have made comparative tests on different varieties of cane seed for sugar content and quality of the syrup and find that there were none that could come up to the "Honey Dew" seed which I purchased from your firm.

SILAS THORLA, Cumberland, Ohio.

We were more than pleased with our seed ordered from you last year. We highly recommend your Honey Dew cane. It has no equal in flavor and also turns out the juice. Every person in the neighborhood is wanting some of our seed.

JNO. C. RICE,

Leander, Ky.

RED TOP SORGHUM—This is one of the best varieties of sorghum, whether for syrup or feeding green or cured for stock. It grows luxuriantly, is as tall as Early Amber, a heavy cropper, and the seed is produced in a closed head, making it easily gathered. It is largely planted in this section, and is a favorite among Kentucky farmers. 1 lb., 20c; 5 lbs., 70c; 10 lbs., \$1.25; postpaid. Buyer's Expense—10 lbs., 90c. All prices include sacks.

EARLY AMBER SORGHUM—Furnishes a large yield of most nutritious forage, which can be fed either green or cured; and will yield two or three cuttings a year, stooling out thicker each time it is cut. The saccharine matter is of the finest quality, and it also produces a fine sugar or syrup. It grows ten to twelve feet high. This is the favorite sort in Northern and many Western States. Sow at the rate of one peck per acre in drills $3\frac{1}{2}$ to 4 feet apart. 1 lb., 20c; 5 lbs., 70c; 10 lbs., \$1.25; postpaid. Buyer's Expense—10 lbs., 90c. All prices include sacks.

EARLY ORANGE SORGHUM—This variety is a favorite wherever grown. It is similar in growth to Early Amber, but is preferred in Tennessee and Southern states, as it produces a heavier crop. 1 lb., 20c; 5 lbs., 70c; 10 lbs., \$1.25; postpaid. Buyer's Expense—10 lbs., 90c. All prices include sacks.

KAFFIR CORN—A great hay and grain crop produces 5 to 10 tons of hay of the finest quality per acre. Greatly relished by all live stock. Average yield 50 bushels per acre. Broadcast or drill 50 to 60 lbs. per acre. 1 lb., 20c; postpaid. Buyer's Expense—1 pk., 75c. All prices include sacks.

HUMOGERM

Humogerm carries the nitrifying bacteria in a porous humus medium which acts as a natural home for them—keeps them fresh, active and vigorous. The ventilated cans are friction top and open easily without cutting.

Place seed in pile, moisten slightly with water and a little sugar, pour on Humogerm and plant in usual way. This gives thorough inoculation, and is cheaper, safer and better than the discredited, laborious soil transfer method.

How to Order

Specify crop and number of bushels you wish to inoculate. The can unit designations are on the bushel basis; for instance, the 1 bushel size contains sufficient culture to thoroughly inoculate 1 bushel of legume seed any variety.

Prices not postpaid: Special garden size for peas, beans and sweet peas, 25 cents. $\frac{1}{4}$ bu. size, 35 cents; $\frac{1}{2}$ bu. size, 60 cents; 1 bu. size, \$1.00; 2 $\frac{1}{2}$ bu. size, \$2.25; all postpaid.

McQUEEN'S INOCULATOR

Inoculate your alfalfa, sweet clover, soy beans, red, alsike, mammoth clovers, vetch, peas, beans, and all other legumes (pod bearing plants). McQueen's Inoculator insures a catch, hastens maturity, increases the crop, enriches the soil and means success with legumes. You can start a nitrogen factory on your farm by inoculating your legume seed with McQueen's Inoculator. An inoculated legume takes nitrogen from the air and stores it in the soil for future crops. BLUE RIBBON SEED CORN

**GATE POST
YELLOW DENT**

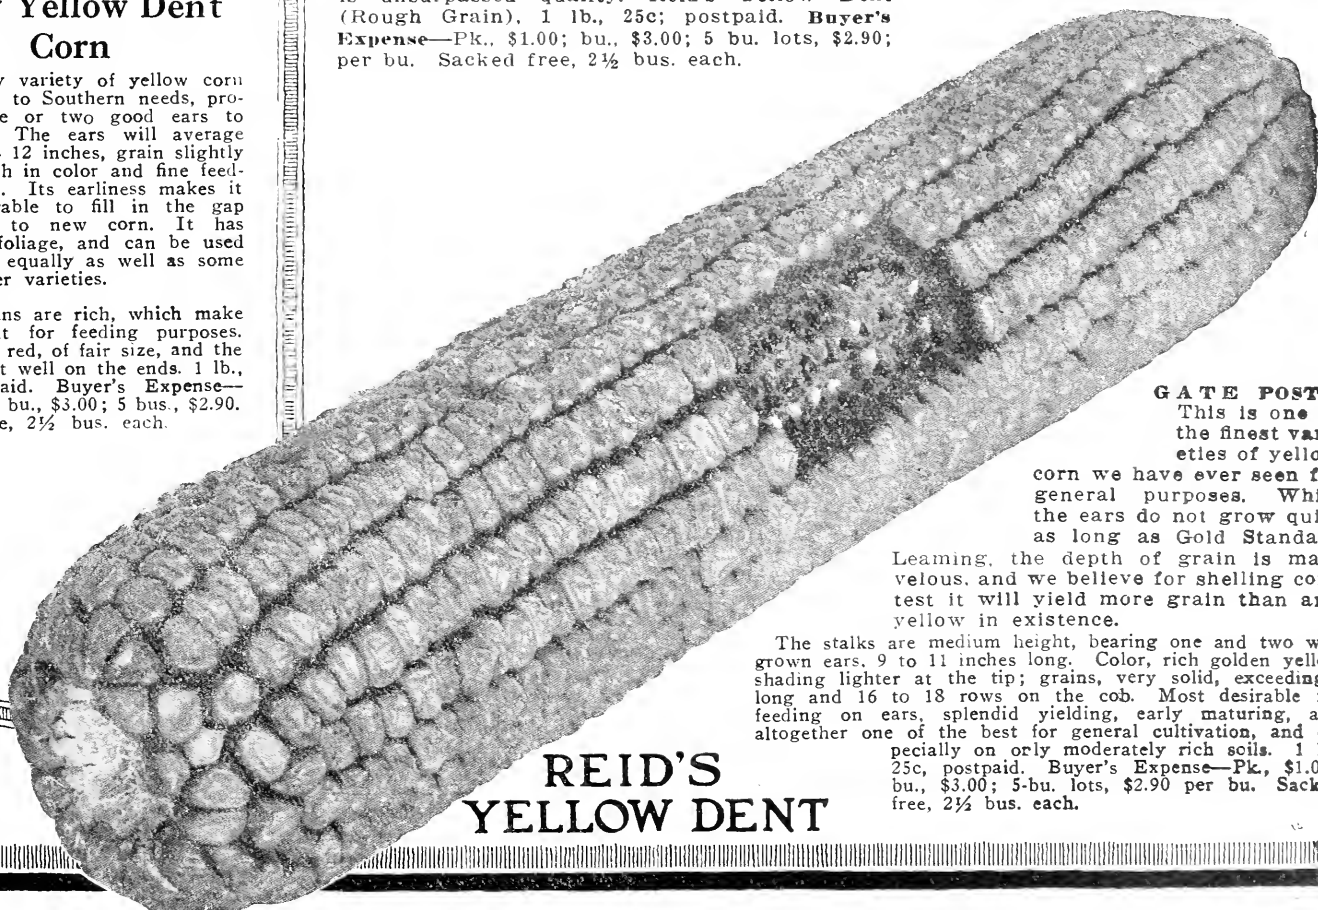

Early Yellow Dent Corn

An early variety of yellow corn well suited to Southern needs, producing one or two good ears to the stalk. The ears will average from 10 to 12 inches, grain slightly dented, rich in color and fine feeding quality. Its earliness makes it very desirable to fill in the gap from old to new corn. It has abundant foliage, and can be used for fodder equally as well as some of the later varieties.

The grains are rich, which make it excellent for feeding purposes. The cob is red, of fair size, and the ears fill out well on the ends. 1 lb., 25c, postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5 bu. lots, \$2.90. Sacked free, 2½ bus. each.

REID'S YELLOW DENT CORN—Mason's Kentucky State Fair 1923, Grand Sweepstakes Strain. A medium early yellow variety, producing well-filled ears of good length and filling out remarkably well, even under adverse conditions.

Stalks of good height, producing one or two good ears, which average 10 to 11 inches long, 14 to 16 rows. Grains flinty deep; slightly dented, rich color, and fine feeding quality. This is one of the most popular early varieties of yellow corn and particularly well liked by stock raisers. In Illinois it is probably the most popular of all, and many of our largest breeders in Kentucky plant it extensively. It has been awarded first premium at corn shows, state and county fairs, and we believe is unsurpassed quality. Reid's Yellow Dent (Rough Grain). 1 lb., 25c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5 bu. lots, \$2.90; per bu. Sacked free, 2½ bus. each.

GATE POST—
This is one of
the finest varieties
of yellow

corn we have ever seen for general purposes. While the ears do not grow quite as long as Gold Standard

Leaming, the depth of grain is marvelous, and we believe for shelling content it will yield more grain than any yellow in existence.

The stalks are medium height, bearing one and two well grown ears, 9 to 11 inches long. Color, rich golden yellow shading lighter at the tip; grains, very solid, exceedingly long and 16 to 18 rows on the cob. Most desirable for feeding on ears, splendid yielding, early maturing, and altogether one of the best for general cultivation, and especially on only moderately rich soils. 1 lb., 25c, postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5-bu. lots, \$2.90 per bu. Sacked free, 2½ bus. each.

REID'S YELLOW DENT

PRIZE WINNING BOONE COUNTY WHITE DENT CORN

HASTING'S PROLIFIC SEED CORN

HICKORY KING—This variety is immensely popular and justly so on account of its heavy yield, both of grain and fodder. While the ears are short, they more than make up for this in the large size of the grain. There are usually two and sometimes three ears on a stalk and the grain is of the very highest quality for milling and feeding. Send us your orders for Hickory King and get it from headquarters. 1 lb., 25c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.25; 5-bu. lots, \$3.15 per bu. Sacked free 2½ bus. each.

IOWA SILVER MINE—One of the best early white corns, which matures in this locality in 85 days. It is pure white, grain is solid, dented, and produces finest meal. Ears are of good length, symmetrical, well filled; grains are deep, narrow, averaging 18 to 20 rows, solidly packed on the cob. Our stock is Iowa grown, 1 lb., 25c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5-bu. lots, \$2.90 per bu. Sacked free 2½ bus. each.

IMPROVED BOONE COUNTY WHITE—The ears are eight to eleven inches long, seven and one-half to eight inches in circumference, averaging from 12 to 18 ounces; cob is medium long, grain pure white and fills out remarkably well, both tips and butts. Boone County white corn has been extensively grown in many sections with very general satisfaction. 1 lb., 25c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5-bu. lots at \$2.90 per bu. Sacked free 2½ bus. each.

MAMMOTH RED COB WHITE DENT—One of the best all-round white sorts for rich land, producing largest crops of finest quality corn. The ears averaging about 10 inches in length, of uniform size and great depth of grain, rows 18 to 34 on red cobs, well filled. The grains are pure white, solid, very deep, producing the finest milling white corn. The yield of this superior corn is very large, sometimes as much as 90 bushels per acre. 1 lb., 25c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.00; 5-bu. lots at \$2.90 per bu. Sacked free 2½ bus. each.

HASTING'S PROLIFIC CORN—Unquestionably one of the finest and most widely used of all good ensilage or fodder corns. Yields 50 to 75 bushels grain per acre as well as an enormous growth of fodder.

Hasting's Prolific Corn is acknowledged by many stock feeders and dairymen as the best of all ensilage varieties. The stalks grow from 8 to 12 feet tall, bearing three to four ears to the stalk. The stalks are stout, deep rooted and stand up well under winds. Good land has been known to produce from four to six well filled, medium size, well shaped ears.

The grain is deep, hard and white. The ears are medium to small, protected by tight fitting shuck. Hasting's Prolific Corn matures in 120 to 130 days, is a splendid corn for roasting ears, grain production, milling purposes and general feeding, but best of all for winter silage, for which it is famous. 1 lb., 30c; postpaid. **Buyer's Expense**—Pk., \$1.50; bu., \$3.50. Sacked free, 2½ bus. each.

EUREKA ENSILAGE CORN—A splendid variety for grain, fodder and feeding. Preferred by many feeders and corn growers to all others. Produces larger ears of grain than any other ensilage variety grown. Very prolific and unsurpassed in quality.

This is truly a remarkable corn, producing an immense amount of fodder and an exceedingly heavy crop of long, slender ears of grain of the finest milling and feeding quality. We do not hesitate recommending this as one of the best of all and second to none for grain, ensilage or general feeding. We do not know of anything finer for ensilage than this variety, and every farmer should plant it freely. Don't fail to try it this year. 1 lb., 30c; postpaid. **Buyer's Expense**—Pk., \$1.00; bu., \$3.50. Sacked free 2½ bus. each.

PRODUCE THE EARLIEST VEGETABLES WITH PLANT BANDS

START YOUR PLANTS EARLY—Place them in bands and by having large plants to set out, gain several weeks on the season.

Plants grown in bands are not injured in transplanting, as the root system is not disturbed. They do not wilt, but will continue their growth and arrive at maturity from two to three weeks earlier than small plants started the old way.

This is especially true in trying to transplant when the ground is in a very dry condition. By using plants in bands one can transfer during the dryest weather.

Not only is the plant band method of growing adaptable to such plants as are ordinarily started under glass and later transplanted to the open field, but plants which are not ordinarily started in that way may have the advantage of an early start. Among this latter class of plants we may mention sweet peas, squash, cucumbers, melons, sweet corn, beans, etc.

Bands make an ideal cut worm guard. After planting, place a new band around plant and bank up the bottom edge with earth to anchor band. Bands 3x3, 25 for 20c; 100 for 60c; 1,000 for \$4.00; case of 2,500, \$8.40, postpaid.

BLUE RIBBON EVERGREEN

A Grass Seed for northern and middle latitudes, of which we sell thousands of pounds each year. We recommend it in place of straight Kentucky Blue Grass, as the latter is slow in starting and takes some time to make a good lawn when seeded alone. It is a mixture of the best grasses for lawn purposes, which insures a fine green sward at all seasons of the year, no one grass keeping in good condition throughout the season. It makes a lawn quicker, as some of the grasses used grow rapidly and in a few weeks' time they are ready to mow. Our seed weighs 20 pounds to the bushel, where the ordinary seed only weighs 14 pounds.

Prices, postage paid: Pound, 60c; 5 pounds, \$2.50.

Prices, at buyer's expense: Pound, 50c; 5 pounds, \$2.25; 20 pounds, \$8.00; 100 pounds, \$38.00.

DIXIE VELVET LAWN GRASS

This is especially prepared for damp and shady places where ordinary Grasses will not thrive. If you have large trees on your property or require a sod on the north side of some buildings, this is just the thing for you.

Prices, postage paid: Pound, 70c; 5 pounds, \$3.00. At purchaser's expense: Pound, 60c; 5 pounds, \$2.75; 20 pounds, \$9.00; 100 pounds, \$40.00.

SHADY GREEN LAWN GRASS

Our friends in the extreme South and dry Western States will find this of exceptional value. It is made up from extremely hardy varieties, those which withstand the hot sun and drouth, such as Bermuda Grass. It can also be used to advantage on dry banks exposed to the sun, where ordinary varieties burn out.

Prices, postage paid: Pound, 60c; 5 pounds, \$2.50. At purchaser's expense: Pound, 50c; 5 pounds, \$2.25; 20 pounds, \$8.00; 100 pounds, \$38.00.
